HOLTER KITS

Vermed Holter Kits are intended for use in conjunction with a portable holter monitor*, typically worn for 24-48 hours to detect irregularities in your heart rhythm that a standard electrocardiogram could not detect.

**Portable holter monitor not included*

Holter Kits come with one of the following electrodes:

- A10097**
VersaTrode™ Leadlocking Electrodes
Wet gel provides quick reading and stabilization. Save time and money by not having to tape down lead wires or replace displaced electrodes. Wire restraint electrodes safely secure lead wires preventing artifact associated with movement.
- A10072**
PerformancePlus™ Leadlocking Electrodes
Specially designed electrode shape helps correct placement. Aggressive adhesive keeps the electrode on patient during daily activity. Save time and money by not having to tape down lead wires or replace displaced electrodes.

Holter Kits

All Holter Kits contain your choice of electrodes and batteries as well as standard skin prep supplies and a patient diary.
